Editorial
TNN On Line

THE entire text of all papers published in the IEEE TRANSACTIONS ON NEURAL NETWORKS (TNN) is now available on line at the web address

<http://www.opera.ieee.org/jolly/>

January 1997 is the first issue thus published. You will see the TNN paper in the same format as the hard copy within these covers. The issue will typically be available electronically before you receive your hard copy issue in the mail. This will especially be true for TNN subscribers outside of North America. The web sight is available to only IEEE members—so have your IEEE number handy when you access. A listing of the most recent table of contents only—available to all—is at

<http://www.ieee.org/pub_preview/nn_toc.html>.

The TNN also posts abstracts of some of the papers currently under consideration for publication. Information on obtaining preprints of these papers is also often provided. The address is

<http://engine.ieee.org/nnc/pubs/tnn/frame_root.html>.

Abstracts for this page are provided voluntarily by authors. The abstracts are posted as submitted by the authors without content review and are posted as a service to the neural networks research community. The TNN Abstracts Editor is Jianchang Mao <IEEETNN@almaden.ibm.com>

All of the web pages mentioned thus far are linked to the NNC home page edited by Payman Arabshahi <payman@ee.washington.edu>. The home page, with the address <http://engine.ieee.org/nnc/>, is worthy of a bookmark.
